Project Title: Digital Literacy Portfolio

Name: Priyanshu Choudhary

Reg No: 25BAI11225

Branch: B.Tech CSE (Artificial Intelligence & Machine Learning)

From: VIT Bhopal University

Course Code: CSE0001

Date: 29-MARCH-2026

INTRODUCTION

This project focuses on building digital literacy skills that are essential for students in today's digital world. As a Digital Ambassador, the objective was to understand and demonstrate the use of various digital tools, platforms, and safe online practices.

Through this project, I explored different platforms such as GitHub, LinkedIn, and HackerRank, and created a digital portfolio. I also learned about professional communication, online safety, and the importance of maintaining a responsible digital presence.

Task 1: Infographic

I created a digital literacy infographic using Canva. I selected a clean and simple template to design a one-page visual that explains the importance of digital literacy for students. The infographic includes key topics such as the meaning of digital literacy, safe internet practices, useful digital tools, professional online presence, and email etiquette.

I used short bullet points and icons to make the content easy to understand and visually appealing. The goal was to create a resource that students can quickly read and apply in their daily academic life. I focused on keeping the design neat and organized rather than adding too much text.

One interesting aspect of this task was learning how to present information visually instead of writing long paragraphs. The main difficulty I faced was selecting the right amount of content, as too much information made the design look cluttered. Overall, this task helped me understand how to communicate important concepts in a clear and effective way.

Task 2: Digital Portfolio

I created my digital portfolio using platforms such as GitHub, LinkedIn, and HackerRank. GitHub is used for storing and showcasing coding projects, which helps in building a strong technical profile. LinkedIn is a professional networking platform where I added my educational details and will use it to connect with peers, seniors, and recruiters in the future. HackerRank is a coding practice platform that helps in improving problem-solving skills.

These platforms are important for building a professional online presence and will be useful during internships and placements. I created and updated my profiles by adding basic details such as my education, skills, and interests. I also created a profile README on GitHub to introduce myself.

Over the next four years, I plan to actively update my GitHub with projects, grow my network on LinkedIn, and improve my coding skills through regular practice on HackerRank. This task helped me understand the importance of maintaining a digital identity from the early stages of my academic journey.

Task 3: Platforms

I explored coding and collaboration platforms by using HackerRank and Google Forms. On HackerRank, I completed a beginner-level problem, which helped me understand basic programming logic and problem-solving. It was a useful experience as it introduced me to coding practice platforms that are commonly used for skill development.

In addition, I created a Digital Literacy Awareness Quiz using Google Forms. The form included five multiple-choice questions related to safe internet practices and digital knowledge. I also viewed the responses using Google Sheets, which helped me understand how data can be collected and analyzed.

These tools are helpful for academic purposes, as coding platforms improve technical skills, while Google Forms can be used for surveys, quizzes, and collaborative work. This task helped me understand how digital tools can be used effectively in both learning and communication.

Task 4: Email Etiquette

One situation where poor digital communication can cause problems is when a student sends an informal or unclear email to a professor. For example, using slang language or not mentioning the purpose of the email can lead to confusion and may create a negative impression.

This issue could be avoided by following proper email etiquette, such as using a clear subject line, a respectful tone, and a well-structured message. Professional communication helps in building a positive image and ensures that the message is understood clearly.

Through this task, I learned the importance of writing clear and professional emails, as well as maintaining proper behaviour on social media platforms.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised to learn how easily people can become victims of phishing attacks. Many scams are designed to look very realistic, making it difficult to identify them at first glance.

One important habit I will change is being more cautious before clicking on links or sharing any personal information online. I will also make sure to verify the authenticity of emails and messages, especially those related to banking or important accounts.

This task helped me understand the importance of online safety and the need to stay alert while using digital platforms. It also made me more aware of the steps I can take to protect myself and others from cyber threats.

CONCLUSION

This project helped me understand the importance of digital literacy in academic and professional life. I learned how to use different digital platforms, create a professional online presence, and communicate effectively through emails.

Overall, this project improved my awareness of safe internet practices and the responsible use of digital tools, which will be beneficial for my future career.
